

Production Engineer

The Gill Group as it is known today is privately owned and made up of four companies; Gill Instruments Limited, Gill Sensors & Controls Limited, Labcal Limited and Gill Research & Development Limited. We are currently looking to grow our Lymington based Production team by recruiting two **Production Engineers** to join the team.

Position Summary

To ensure, through the design, development and maintenance of manufacturing processes, all products are manufactured efficiently and consistently to meet their specification and the business needs, according to current procedures and using the appropriate technology.

Position Responsibilities

- Economically improve the manufacturing efficiency and efficacy through development of production processes, business systems, and recommendations for product changes.
- Support the R&D team in the development of new products so they are economic to manufacture.
- Design and document processes to facilitate the efficient manufacture of new products.
- Provide training on new and modified processes.
- Devise new solutions to existing manufacturing problems.
- Lead and work on projects with multidisciplinary team members to ensure effective delivery of goals.
- Evaluate existing manufacturing processes and workflows to identify areas that could benefit from changes and improvements.
- Encourage & support continuous improvement efforts throughout the organisation.
- Maintain and support current products and manufacturing processes
- Keep abreast of relevant industry advances and champion their introduction.
- Lead and participate in cross-departmental brainstorming sessions and meetings to ensure collaboration and cohesion.
- Collect, analyse, summarise and present production and process data, information and trends to management.
- Estimate staffing requirements, production times, and relative costs to provide data for operational decisions.
- Generate timely and accurate reports.
- Ensure compliance with regulatory approvals, quality standards and similar.

Position Requirements

- Degree qualified (or equivalent) in production engineering, electronics, or mechanical field.
- A minimum of 5 years of professional experience in a modern electronics, software and mechanical device manufacturing environment.
- Certification and experience in process improvement, at least a Green Belt in Lean Six Sigma (project management and CAD experience beneficial).
- Strong problem solving skills; able to diagnose and solve any issue within the domain of production engineering.

- Capable of working with design teams to apply modern manufacturing principles to new product designs.
- Highly motivated with a very strong personal drive and enthusiasm to overcome manufacturing challenges
- Strong negotiating and influencing skills.
- Able to work with minimal supervision.
- Able to clearly communicate complex technical details and ideas.
- Good commercial and financial understanding.
